SAFETY AND TESTING

We know that your clients, your career and your livelihood depend on the safety, reliability and quality of the products you use. Simply put, nobody else tests like OAKWORKS®, Inc. Every one of our new designs goes through a rigorous, specialized, four-part testing protocol including a dynamic load test, a lateral force test, a stability test and component and cycle tests. This equipment is engineered to exceed all the challenges your table might experience in the field, before it gets there.

Dynamic load testing simulates real-life hop and drop table use.
